

Brand guidelines

Version 0.1.0
2026-10-12

This document gives the Pelvy team, and anyone working with it, the guidance to use the brand correctly and consistently across everything it produces.

It is generated from brand.json, so every value here is the value the code is built from. If something is wrong, fix the source and regenerate. It is a living document: version 0.1.0.

Brand framework

What the brand stands for, how it speaks, and what it will not say. Read this before anything else.

Purpose

The one sentence the brand rests on. Every choice in this document should be traceable back to it.

Amelia is a pelvic health physiotherapist. She kept seeing the same thing: a patient would leave with good advice and a program, then struggle to keep up with it. The handout was lost, the email was buried, and the education was hard to find when it was needed. Patients wanted to get better. What they lacked was one place to keep it all and something to count for them. So she built Pelvy from what her patients and the clinicians around her asked for. A clinician subscribes and sets a patient up. The patient gets their clinician's advice, a program that counts every rep, and reminders they control. The clinician gets a patient who can find what they were told. Where no clinic subscribes, a GP or specialist hands over a QR code and the patient subscribes for themselves, starting on a program a physio built.

Make sure what a pelvic health physio would tell you in the room is with you at home.

THE PROBLEM IT EXISTS TO SOLVE

A patient leaves a pelvic health appointment with advice, an exercise program and usually a handout. By the time they need any of it, most is forgotten, lost in an inbox or in a drawer, and the program gets abandoned halfway through a set because they lost count. The clinician then spends the next appointment repeating the last one.

Driver

Make sure what a pelvic health physio would tell you in the room is with you at home.

Mission

Pelvy counts you through the pelvic floor program a physio set, for strength or for letting go.

Positioning

For people working on their pelvic floor, with a clinician or without one yet, Pelvy is the app that counts you through the right program, strength or relaxation, and keeps the advice that goes with it, because it was built by a practising pelvic health physiotherapist who works in pelvic pain. Unlike a Kegel timer, it starts from whether you need to squeeze or to let go. Unlike a handout, it counts and it reminds. Said plainly: squeeze or let go, Pelvy counts you through what the physio set.

The field

Who else the customer could choose, what each of them owns, and the gap this brand stands in. Positioning is only a claim until it is held against the alternatives.

Category. Stated: a pelvic health app that has it all. Actual: a clinician compares it with the handout and the follow-up email, and a person on their own compares it with a free Kegel timer. Chosen frame: the pelvic floor app that counts you through a program a physio set, for strength or for letting go, with your own clinician's advice beside it when you have one.

The handout and the follow-up email

THEY OWN

Trust, habit and zero cost. Every clinician already has them.

THE GAP

They are lost or never opened again, they cannot count a patient through a set, and they cannot remind anyone of anything.

Squeezy

THEY OWN

The NHS-linked pelvic floor exercise reminder, with a professional mode for clinicians.

THE GAP

Sold as separate apps for women and men, and built around exercise reminders rather than around the clinician's own advice.

Device-led trainers such as Perifit and Elvie

THEY OWN

Biofeedback and gamified strengthening, bought direct by consumers.

THE GAP

Hardware, strengthening only, and no clinician in the loop. A person whose pelvic floor needs to relax is being sold the wrong exercise.

General exercise-prescription software

THEY OWN

A place in the physiotherapist's existing workflow.

THE GAP

General purpose, not pelvic health. By Pelvy's own account these tools show a demonstration with the reps written beside it, where Pelvy counts the patient through the whole session.

SAID OUT LOUD

Most pelvic floor apps just tell you to squeeze. Plenty of people need to

Pillars

Set by a physio: yours, or ours

WHY IT MATTERS

Clinicians will only recommend content they trust, and people on their own need to know who is behind it.

HOW IT SHOWS UP IN PRACTICE

- Subscribing clinicians add their own programs and advice from a computer. [P: Amelia, demo video, 2026-03-29]
- The default programs and the Learn section were written by Amelia, a pelvic health physiotherapist who works with pelvic pain and endometriosis clinics. [P: demo video]
- The current store screenshots show a Clinician Notes card at the top of the hub. [E: App Store, 2026-10-12]

It counts, so you can finish

WHY IT MATTERS

The usual reason a program is abandoned is losing count or forgetting. Counting and reminding are what a handout cannot do.

HOW IT SHOWS UP IN PRACTICE

- The player counts every rep and cues every breath: breathe in, breathe out, hold. [E: demo video frames]
- Each program takes up to three reminder times a day. [E: demo video frames]
- Amelia says Pelvy has shown five times the adherence for daily exercises. [P: demo video. Unsourced: do not print until she supplies the data.]

Strength, and letting go

WHY IT MATTERS

Most pelvic floor apps only train squeezing. People with pelvic pain are often doing the wrong exercise.

HOW IT SHOWS UP IN PRACTICE

- Three programs ship in the app: Pelvic Floor Strength, Belly Breathing and Downtraining, and Pelvic Floor with Breath. [E: demo video frames]
- Google Play describes it as 'for strength AND relaxation'. [P: Play listing, 2026-10-12]
- The Learn section sorts its advice into pain and relaxation goals and strength goals. [E: demo video frames]

Personality

How the brand behaves when nobody is watching. Each trait is paired with the thing it is not, because that is where the line gets crossed. **Caregiver, with Sage as the second voice. A drafting prompt only; guard against the Caregiver's failure of fussing over the reader..**

Matter-of-fact

NOT clinical or cold

Talks about a leaking bladder the way you would talk about a sore knee. The subject is ordinary, so the tone is too.

Steady

NOT cheerleading

Counts with you and tells you where you are up to. Does not shout encouragement at someone doing a private exercise in their bedroom.

Knowledgea

NOT lecturing

Explains the one thing you need to know right now, then stops. The clinician has already given the lecture.

Warm

NOT cute

Kind in what it does: a reminder you can set to say nothing at all. Never kind in the form of pet names for body parts.

Discreet

NOT coy

Careful about where words appear, on a lock screen or an envelope, and completely direct once you

Squeeze or let go. Pelvy counts you through it.

Tone of voice

Say it the way a good physio says it across the plinth: plainly, once, with the reason attached.

Brand framework

Caregiver, with Sage as the second voice. A drafting prompt only; guard against the Caregiver's failure of fussing over the reader..

Voice traits

Plain about bodies not coy

Use the word a patient hears in the room: bladder, bowel, prolapse, sex, pain. Say it once, correctly, and move on. Already how the site writes. [P: pelvy.app/features, 2026-10-12]

“Track your bladder, bowel, pain, prolapse and sexual health symptoms.”
“Some pelvic floors are too tight, not too weak. Those need to learn to let go.”

Honest about limits

not apologetic

Say what Pelvy cannot do, or cannot do yet, in the first few words, then say what happens instead. No sorry, no unfortunately. Already how the FAQs and the Learn disclaimer write. [P: pelvy.app/general-user-faqs, 2026-10-12; demo video, 2026-03-29]

“If anything worsens your symptoms, stop the exercises and seek professional support.”
“Once it's deleted, it's deleted.”

Steady not cheerleading

Count, say where the person is up to, and stop. Praise is a full stop, not an exclamation mark. The app screens already do this; the website does not yet. [E: App Store screenshots 5 to 7. Aspirational for marketing copy.]

“Rep 3 of 10. Hold.”
“That's today's program done. The next one is tomorrow.”

Reasoned not lecturing

Give the instruction and the reason in the same sentence, the way a clinician does, and leave the lecture to the clinician. Already how the site writes. [P: pelvy.app/general-users, 2026-10-12]

“Choose your anatomy when you set up, so the cues and the symptom tracker match your body.”
“Save your program before you close your account, because we delete everything when you go.”

Specific not selling

A number, a date or a named feature. Never a superlative, never capitals for emphasis. The pricing answers already do this; the headlines do not yet. [P: pelvy.app/clinician-faqs. Aspirational for headlines.]

“$20 a month for the clinic. Free for your patients for their first six months.”

Tone by situation

The same voice, dialled to who is reading and what state they are in. When two of these disagree, the reader's state wins.

Sentence length, in every tone. 12 to 18 words on average, 25 at most. In the app during an exercise, five at most.

WHEN	THE READER FEELS	SO WE SOUND
A patient opening the app for the first time	Just out of an appointment, unsure, possibly embarrassed.	Warm and brief. Confirm they are in the right place and that it is private, then give one next step. Never excitement they have not earned.
During an exercise	Concentrating, maybe with eyes closed.	Nearly silent. The count and the cue, verb first. Never praise mid-set, never a sentence.
A reminder on a lock screen	In public. Someone else may see the phone.	Discreet by default: 'Time for your program.' Never the condition, a body part or the word pelvic unless the person wrote the reminder themselves.
A clinician reading the website or the deck	Sceptical, short of time, protective of their patients.	Peer to peer. What it does, what it costs, what it does not do yet. Never hype, and never a statistic without its source.
After a missed week	Guilty, and close to giving up.	Matter-of-fact. Say how long it has been and where to pick up. Never guilt, never a streak that has been broken.
Symptoms are not improving, or something hurts	Worried.	Clear and directive. Stop, and see your clinician. Never reassurance about a symptom, because Pelvy cannot assess anyone.
Price, renewal or the end of the free period	Alert and calculating.	The number and the date first, then the reason, then the choice. Never 'we're excited to announce'.
Closing an account	Decided.	Quick and quiet. What happens to their information and how to keep a copy. Never a retention offer.

How we say hard things

Someone whose clinic does not subscribe

Symptoms are worse, or an exercise hurts

Key messaging

The brand

Squeeze or let go. Pelvy counts you through it.

Pelvic health, between appointments.

For people working on their pelvic floor, with a clinician or without one yet, Pelvy is the app that counts you through the right program, strength or relaxation, and keeps the advice that goes with it, because it was built by a practising pelvic health physiotherapist who works in pelvic pain. Unlike a Kegel timer, it starts from whether you need to squeeze or to let go. Unlike a handout, it counts and it reminds. Said plainly: squeeze or let go, Pelvy counts you through what the physio set.

The figure that makes a P

Each program takes up to three reminder times a day. [E: demo video frames]

Amelia says Pelvy has shown five times the adherence for daily exercises. [P: demo video. Unsourced: do not print until she supplies the data.]

The result

Pelvy counts you through the pelvic floor program a physio set, for strength or for letting go.

Your advice and your program go home with your patient.

A physio-built pelvic floor program you can recommend in one scan.

Everything your clinician gave you, in one place, and it counts for you.

Pelvy says exactly what it is: education and support between appointments, with patient data deleted on exit.

Start with Pelvy. It will tell you when to see a physio.

Write like this

Spelling
Australian English: colour, organise, centre, program, physiotherapist. Licence as a noun, license as a verb.

Contractions
Yes, always. 'It isn't in the app yet', never 'it is not'.

Sentence length
12 to 18 words on average, 25 at most. In the app during an exercise, five at most.

Emphasis
Never capitals. The site's ONE, ALL and ONLY become ordinary words. If a sentence needs emphasis, shorten it.

Exclamation marks
None in the app, none in clinician copy, none about money. One per page elsewhere, and prefer none.

Dashes
No em dashes. A comma, a full stop or brackets.

Headings
Sentence case, in Literata. 'What Pelvy helps with', never 'Explore The Ecosystem'.

Buttons
Sentence case, verb first, no punctuation, and say what really happens. 'Book a demo', not 'TRY PELVY!'.

8 more recorded rules are on the page that follows.

WE SAY

your clinician (name the profession when you know it: your physio, your GP) · program (the exercises a clinician set) · pelvic floor exercises (and 'Kegels' only once, to say they are the same thing) · let go, relax (for a pelvic floor that needs to release) · your clinician's advice, your clinician's notes · between appointments · you (to a patient), your patients (to a clinician) · set up (what a clinician does for a patient) · reminders · anatomy (when an instruction depends on it) · the pilot (while it is one)

What your clinician told you, still with you at home.

Not like this

WE NEVER SAY

journey · empower · mega app · the only app · treats · cure · diagnose · optimise · elevate · down there · general users · simply · miss a beat · wellness

Accessible pelvic health support, built on evidence-based exercises and guidance

Writing guidance, continued

The rest of the recorded rules. 16 are held in the brand file and every one of them is on a page.

A rule nobody wrote down is a rule the next person guesses at, which is why the set grows rather than being trimmed to fit a page.

Numerals
Always numerals for reps, holds, days, prices and times: Rep 3 of 10, hold for 5 seconds. Words for one to nine in ordinary prose.

Dates and times
3 October 2026. 7am, 5.30pm.

Anatomy
Name anatomy only when the instruction depends on it, and never use gender as a stand-in for it. Never address readers as ladies or mums.

Serif and sans
Literata is for words a person says: headlines and clinicians' notes. DM Sans is for everything the app says.

Money
$4.99 a month, $19.99 a year. Keep the cents a price really has and drop them on whole dollars: $20, never $20.00. Say AUD once on any page read outside Australia.

Pronouns
We for Pelvy. Amelia by name when it is Amelia. You for the reader. Your clinician, never the provider.

Claims
Pelvy guides, counts, reminds, keeps and explains. It does not treat, cure, fix or diagnose, and it never promises a result.

Emoji
None, anywhere in the product or in headings.

Logo

The one element nobody may improvise with.
Size, clear space and placement are rules,
not suggestions.

Our logo

The logo is the one Pelvy has used since 2024: the name, then a figure reaching up whose body sweeps into the bowl of a P. Nothing about the drawing has been redesigned. It existed only as a 228 pixel image and a cropped app icon, so it has been copied into vector, shape by shape, with its edges fitted as smooth curves and the tip of the arm restored from the one file that had not cropped it. The name is set in Sulphur Point Bold, the typeface the published lettering was made with. What is new is the treatment: flat instead of graded, and in deep sage so it holds against white. A simplified symbol and a small grade, redrawn from the same figure, take over at sizes where the fine lines close up. It is a candidate until Amelia approves it.

Placement. Top left on the website, the deck and print, with clear space of half the symbol's height around it. Deep sage on paper and white, ink on sage, white on deep sage. Once per surface. In the app it appears on the sign-in screen and as the icon, and nowhere inside the screens.

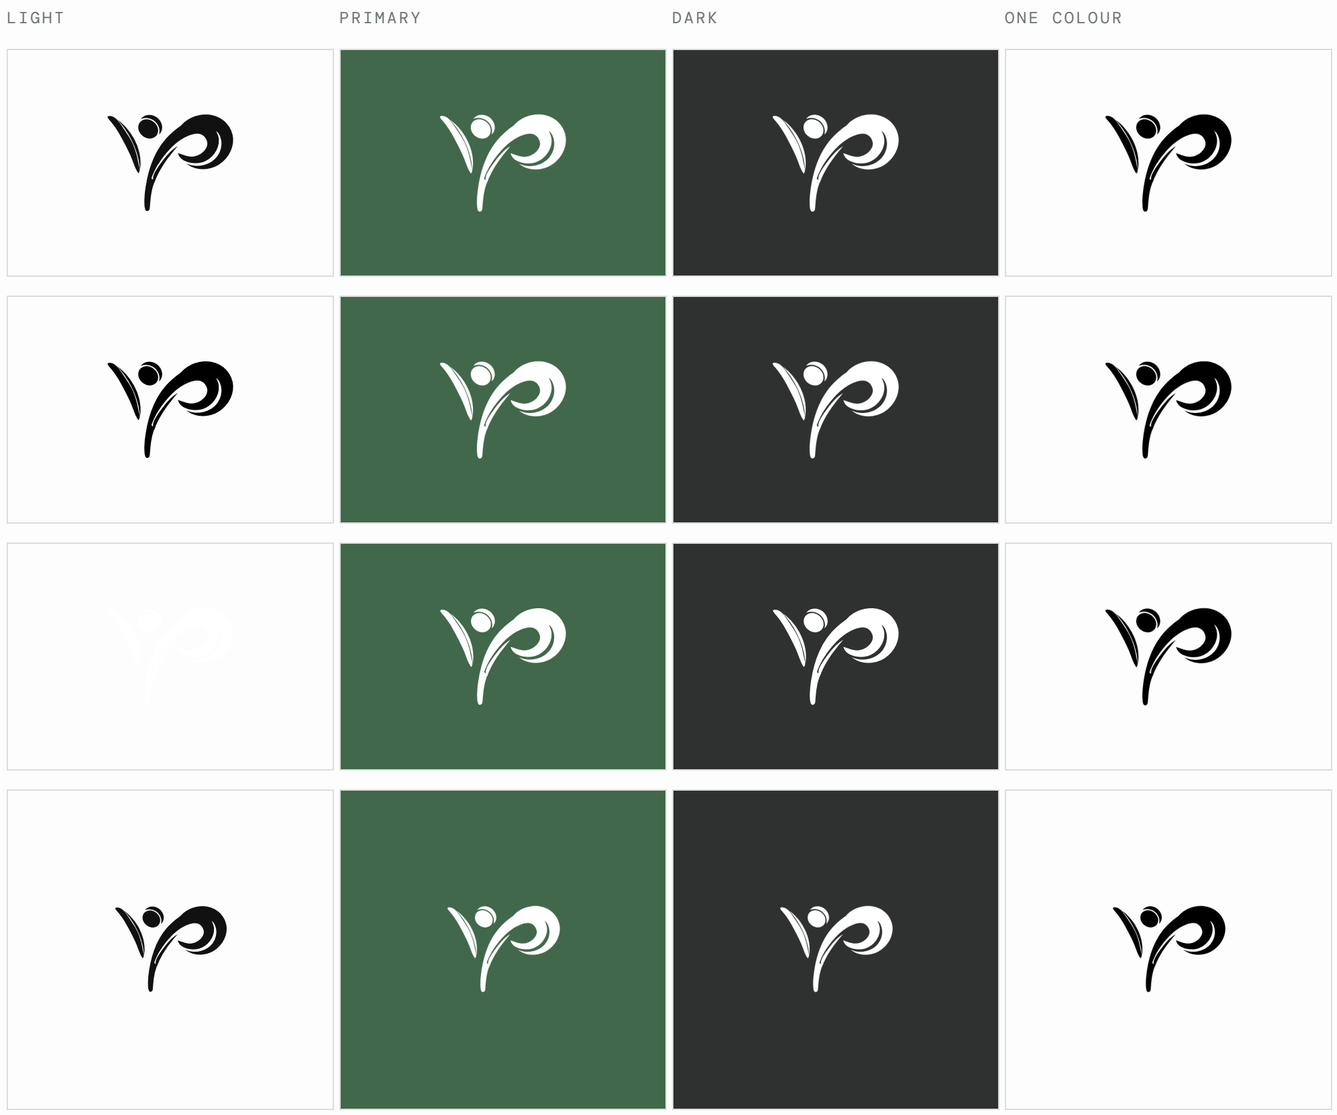

brand/logo/master/primary.svg (primary). The artwork is the file, not a picture of it.

Variants on backgrounds

Each recorded variant on the four grounds it will meet: the page, the brand colour, a dark surface and one colour.

On the brand colour, on dark and in one colour the artwork is shown as a silhouette made by filter, for reference only. Use the supplied reversed and one-colour artwork in production, never a filter.

One colour. One colour is deep sage, or black on a mono printer, or white reversed out. The lighter shapes take the same ink.

Primary

Everywhere, unless another variant is specifically called for.

One colour, black

Etching, foil, single-colour print, fax, a black and white printer.

Reversed

Knocked out of the dark surface token, and out of photography above the stated tonal window.

Logo

The default wherever the name has to be read: website header, deck, print, the set-up card. The published arrangement, name first and symbol after, in deep sage with the lighter shapes in sage.

`[Not recorded yet: brand/logo/lockups/pelvy-logo-brand.svg not on disk; primary shown]`

Colourways

A colourway is recorded as a mapping from the inks the mark was drawn in to roles in this palette, never as fixed colours, so every treatment moves when the palette moves.

Colour came after the silhouette was approved, and it may not carry meaning the silhouette cannot carry alone. Each treatment is shown beside its own greyscale and at sixteen pixels for exactly that reason: if the mark stops being the mark as you move right, the colour was doing the shape's job.

`[Not recorded yet: an approved colourway; no colourway has been approved]`

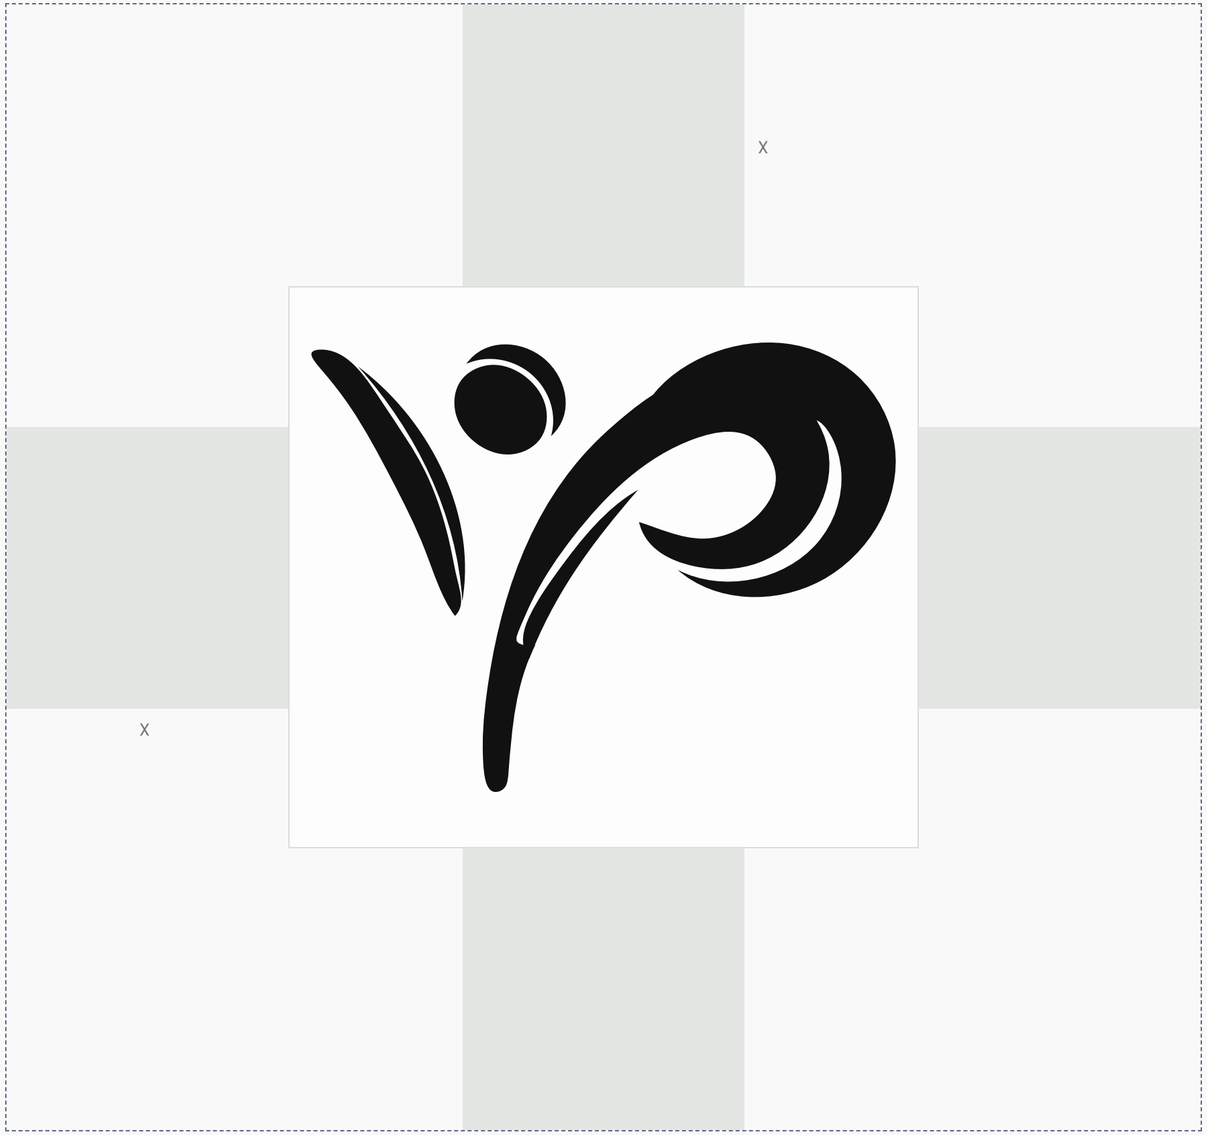

Until one is approved the mark is used in the variants on the previous page. Colour is a stage, not a setting: it opens once a person has approved the silhouette, and the treatments are dealt from this palette rather than chosen by eye.

Run `brandi logo colour plan`, look at the boards, then `brandi logo colour approve <id> --approved-by "name"`.

Clear space

Leave clear space on every side equal to half the height of the mark. Nothing enters it: no type, no rule, no edge of the page, no other logo.

Nothing enters the clear space: no type, no rule, no edge of a photograph, no other logo. It is a minimum, and more is always allowed.

X is drawn at 0.5 of the mark height for this diagram. The rule in words is what binds; measure it against the outlined artwork before it reaches a signwriter.

Minimum size

Below these sizes the counters close and the detail goes. The recorded figure is the mark's height, shown here in screen pixels at actual size; the print figure is the same measure in millimetres.

Preferred minimum (Logo). 30mm / 120px high. Width. Below this the white lines inside the symbol close up and the lighter crescent stops reading as a separate shape.

Absolute minimum. 12mm / 48px high.

Other variants: Symbol 12mm / 48px; Simplified symbol 6mm / 20px; Small grade 4mm / 16px.

300px high

210px high

150px high

120px high

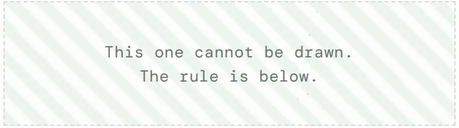

absolute
48px / 12mm

The preferred minimum is the last step of the ladder: 120px / 30mm. Nothing is drawn smaller than the absolute minimum, marked in orange. Every step here is at actual size.

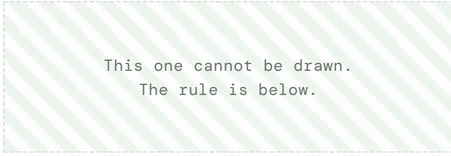

Logo misuse

Drawn, not described, because a rule somebody has seen broken is a rule they remember.

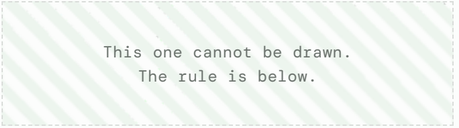

9 misuses recorded.

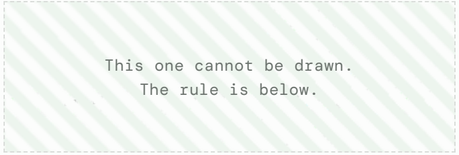

✕ Never use the old 228 pixel image, or any screenshot of it.. It is the reason the logo looks soft everywhere. The vector copy replaces it.

✕ Never bring back the gradients.. The flat version prints, embroiders and etches. The gradient copy is kept for reference only.

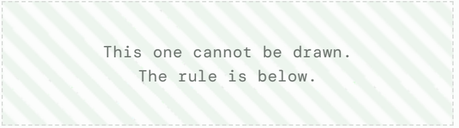

✕ Never set the logo in the 2024 sage on white or paper.. The 2024 sage measures 2.9 to 1 against white. The logo is deep sage, with sage only for its lighter shapes.

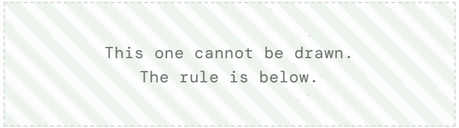

✕ Never put the white logo on either sage.. White on sage fails contrast. On sage the logo is ink.

Pelvy

✕ Never retype the name.. The wordmark is Sulphur Point Bold, outlined, at a fixed size and position beside the symbol.

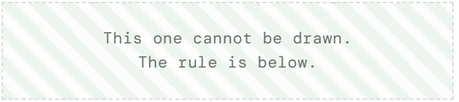

✕ Never move the symbol, change the gap, or use the symbol to the left of the name.. The published arrangement is the one people know.

✕ Never shrink the symbol under 48 pixels. Use the simplified symbol, then the small grade.. Its fine white lines close up and the shapes merge.

✕ Never rotate, stretch, outline or add a shadow.. The figure reads as a person reaching up only when it is upright and flat.

✕ Never use the symbol as a bullet, a pattern or a watermark over video.. It is a signature, used once per surface. The video thumbnails currently carry it as a watermark.

Co-branding

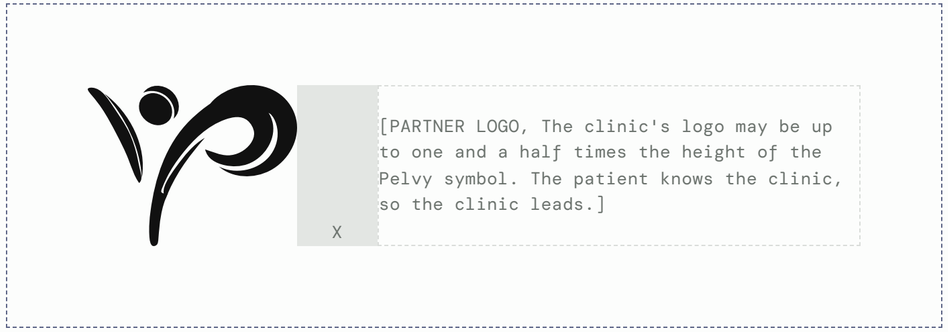

Beside a clinic's logo, on a set-up card or a poster, Pelvy comes second: the clinic's logo on the left, Pelvy's lockup on the right, with the line 'Your program is on Pelvy' doing the joining.

Alignment. The clinic's logo is centred on the cap height of the Pelvy wordmark.

Gap. At least the height of the Pelvy symbol between the two.

Partner size. The clinic's logo may be up to one and a half times the height of the Pelvy symbol. The patient knows the clinic, so the clinic leads.

The gap is drawn at 0.5 of the mark height, the same X as the clear-space page; the rule in words binds.

Alignment: The clinic's logo is centred on the cap height of the Pelvy wordmark..

Tagline

Not locked to the mark. Set in DM Sans Regular, in ink or deep sage, on its own line.

No lockup. The tagline stands alone in headline position, as shown. Nothing on this page may be reproduced with the mark attached to it.

Where. On the deck cover, the poster, the app store subtitle and the website footer. Not inside the app, and never rewritten into a promise about results.

HEADLINE POSITION, ALONE

Pelvic health, between appointments.

Favicon and app icon

[Not recorded yet: the favicon artwork; brand/assets/favicon.ico is recorded but not on disk]

shown at 480px for detail

16px 32px 64px 180px

neutral.ink	#2E312F	6/0/4/81 computed	-	-	-	-	-

Chart colour

A brand palette is built for hierarchy and a chart palette is built for discrimination. Categorical colours here are checked to stay apart under protanopia, deuteranopia and tritanopia, which the brand ramps are not.

#2E904E #A196F2 #B35195 #41BD9A #8364C8 #D59639

Extended ramps

Twelve steps per family. Steps 1 and 2 are backgrounds, 3 to 5 are fills, 6 to 8 are borders, 9 is the colour itself and 10 its hover, 11 and 12 carry text.

Proportion. Mostly paper and white. Deep sage is the brand colour: the logo, brand text, progress, and the one main action on a view. Sage, the 2024 colour, means let go: the in-breath, relaxation content, and the quiet ground behind app screens and photographs, with ink type at 24 pixels and above only. Soft sage, a lighter step of it, is the ground for the clinician's note and anything read at text size. Slate means work: the out-breath, the squeeze and strength content, and nothing else. Ink carries the reading. White text sits on deep sage or slate, never on either sage.

Colour pairings

Text colours as rows, backgrounds as columns. A tick means the pair clears WCAG 2.2 AA for normal text (4.5:1), measured when this deck was generated, not asserted.

Accent 2 is not to be used for text under any circumstances.

TEXT ON	Ink	Muted ink	Brand	Accent 1	Accent 2	Brand tint	Page	White
Ink	✗	✗	✗	✗	✗	✓	✓	✓
Muted ink	✗	✗	✗	✗	✗	✗	✓	✓
Brand	✗	✗	✗	✗	✗	✓	✓	✓
Accent 1	✗	✗	✗	✗	✗	✓	✓	✓
Accent 2	✗	✗	✗	✗	✗	✗	✗	✗
Brand tint	✓	✗	✓	✓	✗	✗	✗	✗
Page	✓	✓	✓	✓	✗	✗	✗	✗
White	✓	✓	✓	✓	✗	✗	✗	✗

Dial up, dial down

The same palette carries two registers. Dialled up, the brand colour is the ground and the type sits on it. Dialled down, the dark surface takes over and the brand colour becomes an accent. Neither is a different brand.

Dialled up

Type on the brand colour

ground #41684A / type #FFFFFF

Dialled down

Type in the brand tint

ground #111111 / type #9BBFA2

Typography

Two faces, one scale, and a hierarchy that tells the reader what to look at first.

Primary typeface

Literata is used for headings and display.

Set at -0.017em tracking and 1.202 line height at the page-heading size. Tighter as it gets larger.

Licence. TypeTogether for Google, via Google Fonts. SIL Open Font Licence 1.1: free for web, app, print and embedding, including commercial use.

`Fallback stack: Georgia, serif`

Literata

AaBbCcDdEeFfGgHhIiJjKkLlMmNnOoPpQqRrSsTtUuVvWwXxYyZz 1234567890

Pelvy is a pelvic floor app built by Amelia, a pelvic health physiotherapist who works with pelvic pain. It counts you through programs for strength and for relaxation, breath by breath, with video for every stretch and reminders at the times you choose. When your clinic subscribes, your clinician adds their own programs and advice and your first six months are free. When it doesn't, Pelvy Lite gives you a physio-built starting program for $4.99 a month or $19.99 a year. Pelvy is education and support: it does not give individual medical advice, and it tells you when to see a pelvic health physio.

Secondary typeface

DM Sans is used for body copy, sub-headings and interface text.

Set at -0.006em tracking and 1.511 line height at 17px. A measure of 62 characters.

Licence. Colophon Foundry for DeepMind, via Google Fonts. SIL Open Font Licence 1.1, as above. Already in use on pelvy.app.

`Fallback stack: system-ui, sans-serif`

DM Sans

AaBbCcDdEeFfGgHhIiJjKkLlMmNnOoPpQ

Pelvy is a pelvic floor app built by Amelia, a pelvic health physiotherapist who works with pelvic pain. It counts you through programs for strength and for relaxation, breath by breath, with video for every stretch and reminders at the times you choose. When your clinic subscribes, your clinician adds their own programs and advice and your first six months are free. When it doesn't, Pelvy Lite gives you a physio-built starting program for $4.99 a month or $19.99 a year. Pelvy is education and support: it does not give individual medical advice, and it tells you when to see a pelvic health physio.

Typography hierarchy

Hierarchy comes from face, size and weight together. The display face carries headings and pull quotes; the body face carries everything a reader has to get through.

Do. Keep the main heading dominant, the subheading supportive and the body legible. Set columns in characters, not pixels.

Do not. Mix faces within one level, make two levels look alike, or carry hierarchy with colour alone.

Display
Literata 700 / 58px

Squeeze or let go. Pelvy counts you through it.

Heading
Literata 700 / 37px

For people working on their pelvic floor, with a clinician or without one yet, Pelvy is the app that…

Subheading
DM Sans 700 / 30px

Patients who follow the program between visits, without more admin.

Body
DM Sans 400 / 19px

Pelvy is a pelvic floor app built by Amelia, a pelvic health physiotherapist who works with pelvic pain. It counts you through programs for strength and for relaxation, breath by breath, with video for every stretch and…

Pull quote
Literata 400 / 46px

What your clinician told you, still with you at home.

Type scale

A major third scale from 17px. Each step is fluid between the mobile and desktop sizes; the print size is the desktop size in points. Each step is set in its own face.

The sample is shown at its desktop size up to 64px. 4xl is larger than that, so that sample is drawn at 64px to fit the row. The real size is in the Desktop column.

Weights: regular 400, medium 500, bold 700.

STEP	SET IN ITS OWN FACE, UP TO 64PX	MOBILE	DESKTOP	PRINT	LINE HEIGHT	TRACKING	USE
4xl	**Pelvy**	64.85px	72.48px	54.4pt	1.05	-0.022em	Display, one per page at most
3xl	**Pelvy**	51.88px	57.98px	43.5pt	1.125	-0.022em	Hero headings
2xl	**Pelvy**	41.5px	46.39px	34.8pt	1.202	-0.017em	Page headings
xl	**Pelvy**	33.2px	37.11px	27.8pt	1.28	-0.017em	Sub-headings
lg	**Pelvy**	26.56px	29.69px	22.3pt	1.357	-0.012em	Card and section headings
md	**Pelvy**	21.25px	23.75px	17.8pt	1.434	-0.006em	Lead paragraphs, large UI text
base	Pelvy	17px	19px	14.3pt	1.511	-0.006em	Body copy. Everything is measured from here
sm	Pelvy	15.21px	16.99px	12.7pt	1.55	0em	Secondary UI text, labels
xs	Pelvy	13.6px	15.2px	11.4pt	1.55	0em	Captions, helper text, badges
2xs	Pelvy	12.16px	13.6px	10.2pt	1.55	0.01em	Legal lines, dense table metadata

Typography examples of use

Six compositions from real brand copy: a headline, a section intro, a call to action, boilerplate, a data block and a quote. Conceptual, not final artwork.

Squeeze or let go. Pelvy counts you through it.

SECTION ONE

Pelvic health physiotherapists

Patients who follow the program between visits, without more admin.

Pelvy counts you through the pelvic floor program a physio set, for strength or for letting go.

Book a demo

Pelvy is a pelvic floor app built by a pelvic health physiotherapist. It counts you through strength and relaxation programs, with your own clinician's advice when you have one.

PRICE OR HOURS

[Not recorded yet: a price or opening hours block; none recorded in the applications]

Your clinician's advice, your exercises and your reminders, in one app.

Brand assets

Imagery, icons, shape and the supporting device:
the things that make the work recognisable
before anyone reads a word.

Imagery

The app is the picture. The lead image on any Pelvy surface is a real screen from the app: the clinician's note, the count, a program. Photography is the setting around it: the corner of a home where the exercises get done, and the treatment room. Rooms, objects and hands before faces. Movement is shown with stills from the app's own exercise videos, never drawn.

Treatment. Natural light, warm when it is warm: late afternoon through a curtain, morning through a clinic window. True colour, never tinted green. Sage turns up on its own in a mat, a wall or a plant. Lived-in and slightly untidy beats styled. Photographs take the 22 pixel radius and leave a quiet third for type.

Rights. [TO CONFIRM: who owns the photograph in the current website hero, and whether the clinician shown has signed a release] Required for every identifiable person, patients and clinicians alike. No patient is ever photographed in a clinical setting.

Shot list

Recorded against the surfaces that need them.

SURFACE	SHOT	WHY
web	A phone propped up at home showing the treatment hub: mat, mug, late light	The website hero and the poster need the app in the place it is used.
deck	A clinician's hands setting up a program on a phone, patient out of frame	The clinician page and the deck need the hand-over moment.
social	Stills from the exercise videos, re-exported without the old logo watermark	Social and the store listing need movement shown by a real person.
print	The old way: a creased paper handout on a fridge door or in a kitchen drawer	The problem, in one picture, for the one-pager.
web	Amelia in her clinic, looking at the camera, credited	The About page and press. A founder-led health product needs its founder visible.

Photography

What a photograph from this brand does, and what it never does. Anything not on the left is a question for whoever commissions the shoot.

Text tiles until the library has photographs to show.

Yes, use me

- ✓ Lead with a real app screen, flat and legible, at phone proportion with the panel radius.
- ✓ Photograph the real clinic and the real home setting, including the slightly worn bits.
- ✓ Use stills from the app's own exercise videos for anything that demonstrates a movement.
- ✓ Credit clinicians by name and role, with a signed release on file.
- ✓ Show every kind of body Pelvy is for across a set: different ages, sexes and sizes.
- ✓ Leave a quiet third of the frame for type.

Do not use me

- ✕ No drawn phones and no rendered 3D devices. Show the screen itself, or a real phone in a real photograph.
- ✕ No illustrated people of any kind.
- ✕ No fruit, flowers or shells standing in for anatomy.
- ✕ No women-only casts. Pelvy is for everyone with a pelvis.
- ✕ No generated images of people, ever. Generated photography is limited to rooms and objects, and is labelled.
- ✕ No posed wellness: no white linen, no hands on a bare belly, no sunrise yoga.
- ✕ No screen that shows a real patient's name or note.

Icons

Outlined, one weight, round caps and joins to match DM Sans. Icons sit bare on the surface and are never placed inside a pastel circle or a tinted tile.

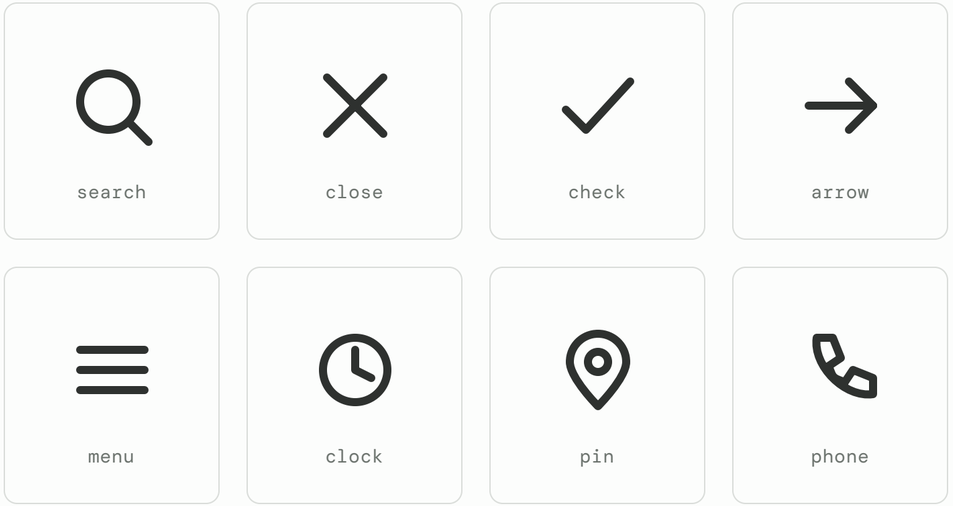

Drawn on a 24px grid at a 2px stroke with round terminals and round corners. Icons are drawn, never typed: emoji render differently on every platform.

Source. Drawn to match DM Sans Regular: a 2 pixel stroke on a 24 pixel grid, round caps and joins.

Starter set. Lucide (ISC licence) at its 2 pixel stroke, until a bespoke set of the twelve or so icons the app needs is drawn in the same line as the figures.

24px grid, 2px stroke, shown at 18x

At actual size: 24px is the smallest an icon is drawn at, and the stroke never thins below 2px.

Shape and corners

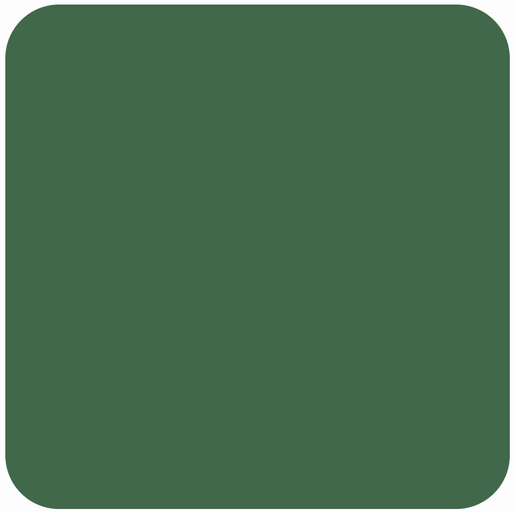

rounded. Friendly, consumer, approachable.

Cards and controls take --radius-md (10px). A box nested inside another takes the outer radius minus the gap between them, or the inner corner reads as too round.

Tokens: none 0, xs 5, sm 7.5, md 10, lg 15, xl 22.5, 2xl 35, full 9999.

Too sharp

--radius-none 0px, shown at 4x

Just right

--radius-md 10px, shown at 4x

Too curved

--radius-2xl 35px, shown at 4x

Supporting graphic device

The clinician's note. Serif is a person speaking; sans is the app. The biggest words on a Pelvy surface belong to the clinician, and Pelvy's own voice stays small beside them. Every note shown is a real one used with permission, or is marked as a sample.

What it breaks. Health apps speak in the brand's voice and put their own claims largest. Pelvy gives its biggest type to somebody else: the clinician.

THE THING TO BUILD

A soft sage card (step 8 of the sage ramp, #ABC8B1) with a 22 pixel radius. The clinician's words in Literata, ink. Underneath, in DM Sans, the clinician's name and role. Nothing else on the card.

WHERE IT LANDS (9)

- Website hero
- The notes screen in the app
- The clinician deck
- The waiting room poster
- The clinic one-pager
- Instagram education posts, quoting Amelia
- Program emails
- The patient set-up card
- App store screenshots

Also recorded: The count ring, Sage behind, ink in front.

System

Spacing, layout, motion and accessibility, as tokens the code is built from.

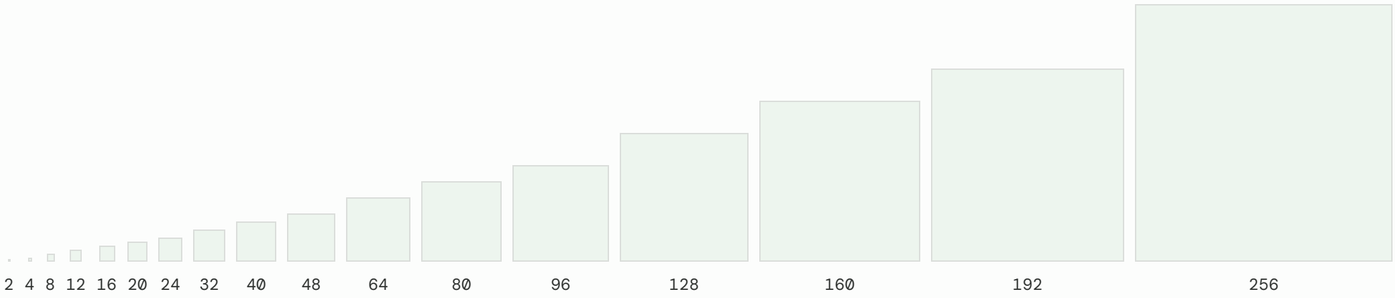

Spacing and layout

A 4px base. Tokens are named by their pixel value, so --space-16 is 16px and needs no arithmetic.

Breakpoints are a starting set. The real ones are wherever this layout breaks, and you find those by dragging the window rather than by naming devices.

`--content-max 575px: the measure of 62 characters plus a 24px gutter each side.`

Space drawn at three quarters, so the whole scale fits on one line

Breakpoints

`--bp-sm 480px`	Above a large phone. Two columns of small controls be…
`--bp-md 768px`	Tablet portrait. A single column can become two.
`--bp-lg 1024px`	Laptop. Sidebars and three-column grids hold.
`--bp-xl 1280px`	Where the fluid type stops growing, so the layout stops with it.
`--content-max 575px`	the reading column

Motion

Motion in Pelvy breathes. Things ease in and settle the way a slow breath does, at the pace the clinician set, and nothing bounces for attention.

The default. Motion explains what changed.

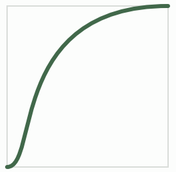

The breath. The count ring on an exercise screen swells gently on the in-breath and settles on the out-breath, over the hold time the clinician set. In the interface, a card that appears rises 8 pixels and settles once, with a slight overshoot. `320ms cubic-bezier(0.34, 1.3, 0.64, 1)`

Every transition honours prefers-reduced-motion.

Durations

`--duration-instant`	`0ms`	Anything that must feel like a direct manipulation
`--duration-fast`	`120ms`	Hover, focus, small state changes
`--duration-base`	`200ms`	The default. Dropdowns, tooltips, toggles
`--duration-slow`	`320ms`	Panels, drawers, anything crossing the screen
`--duration-slower`	`480ms`	Page and route transitions. Rarely anything else

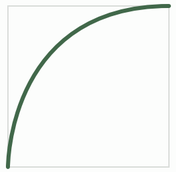

Easings

`--ease-standard`

`cubic-bezier(0.2, 0, 0, 1)`

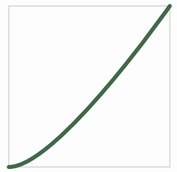

Movement within the screen

`--ease-enter`

`cubic-bezier(0, 0, 0, 1)`

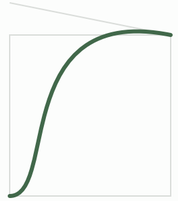

Something arriving. Decelerates into place

`--ease-exit`

`cubic-bezier(0.3, 0, 1, 1)`

Something leaving. Accelerates away

`--ease-emphasis`

`cubic-bezier(0.3, 0, 0, 1.2)`

A single overshoot. One per screen at most

Accessibility

Every pairing here was measured when this deck was generated, and every one passed. Nothing is a claim; the numbers are the evidence.

Focus is visible on every interactive element: a 2px outline at 2px offset. Targets are 24px at least, 44px where there is room. Nothing is carried by colour alone. WCAG 2.2 1.4.1, 1.4.3, 1.4.11, 2.4.7, 2.5.8.

Known problems. In dark mode the brand colour (#41684A) has only 2.96:1 against the page background (#101210). It cannot carry meaning on its own here. Pair it with a shape, a label, or step 10 for anything a reader must notice.

PAIRING	THEME	VALUES	MEASURED	APCA	REQUIRED	VERDICT
Body text on the page	light	#2E312F on #FCFDFC	12.90:1	Lc 98.12	needs 4.5:1	pass
Secondary text on the page	light	#6B726D on #FCFDFC	4.84:1	Lc 72.85	needs 4.5:1	pass
Brand-coloured text	light	#587A5F on #FCFDFC	4.72:1	Lc 71.98	needs 4.5:1	pass
Label on the brand fill (normal text)	light	#FFFFFF on #41684A	6.36:1	Lc -86.65	needs 4.5:1	pass
The focus ring	light	#41684A on #FCFDFC	6.23:1	Lc 80.17	needs 3:1	pass
Body text on the page	dark	#EAEEEB on #111111	16.12:1	Lc -95.58	needs 4.5:1	pass
Secondary text on the page	dark	#AFB6B0 on #111111	9.12:1	Lc -61.34	needs 4.5:1	pass
Brand-coloured text	dark	#9BBFA2 on #111111	9.32:1	Lc -62.49	needs 4.5:1	pass
Label on the brand fill (normal text)	dark	#FFFFFF on #41684A	6.36:1	Lc -86.65	needs 4.5:1	pass
The focus ring	dark	#487151 on #111111	3.38:1	Lc -23.4	needs 3:1	pass

COLOUR VISION

Status is never carried by colour alone: every state gets an icon and a word.

Implementation

Everything in this deck is generated from brand/brand.json. The token files are generated from the same source, so the deck and the code cannot disagree.

The one rule. Build with the semantic tokens, never with a raw ramp step. If a component needs something the semantic layer does not have, add it to the semantic layer.

`brand/tokens/tokens.json`

Design Tokens Community Group format, for a build pipeline.

`brand/tokens/tokens.css`

Custom properties, both themes. This is what most work imports.

`brand/tokens/tailwind.css`

A Tailwind v4 theme block.

`brand/tokens/tokens.ts`

Typed values, for anything that needs them in JavaScript.

`brand/system.json`

The resolved system: every ramp, every token, audited.

`brand/brand.json`

The source. Every page here is a view of it; fix it there and regenerate.

THE NAMES TO REACH FOR

`--surface-page` `--text-primary` `--accent-solid` `--space-16` `--radius-md` `--duration-fast`

Brand in use

The system meeting real work, which is the only place it can be judged.

Applications

Every surface the brand has to work on, what each is for, and the notes that decide how it is drawn. The pages that follow show the ones drawn so far.

19 drawn: AppHub.dc.html, AppProgram.dc.html, AppBreatheIn.dc.html, AppBreatheOut.dc.html, AppHold.dc.html, AppLearn.dc.html, AppSubscribe.dc.html, Main.dc.html, Mobile.dc.html, Profile.dc.html, Deck.dc.html, Print.dc.html, Social.dc.html, Poster.dc.html, Card.dc.html, MockupTotebag.dc.html, MockupTheappathome.dc.html, MockupWaitingroomposter.dc.html, MockupPatientsetupcard.dc.html.

Clinician demo deck

A proof artboard from the brand canvas, rendered as it was drawn.

The slide Amelia opens a demo on: the app on screen, read from the back of a clinic meeting room.

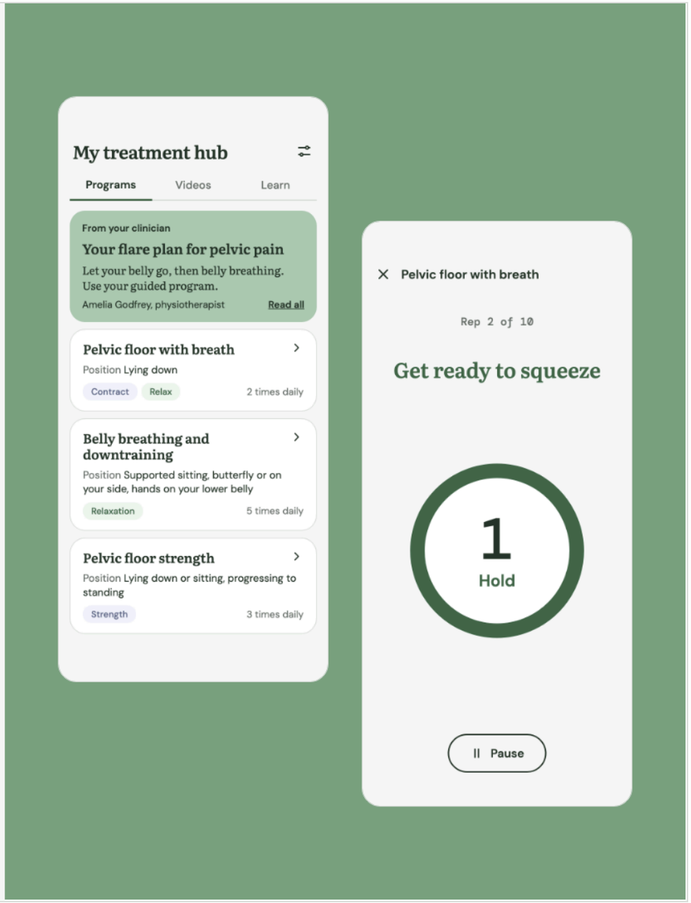

`Deck.dc.html / 1920x1080`

Pelvy

What you tell your patients in the room, still with them at home.

A demo for pelvic health clinicians, with Amelia Godfrey, pelvic health physiotherapist.

1 Pelvic health, between appointments.

Clinic one-pager

A proof artboard from the brand canvas, rendered as it was drawn.

A4, left with a practice manager after a demo. Works in greyscale on the clinic's own printer.

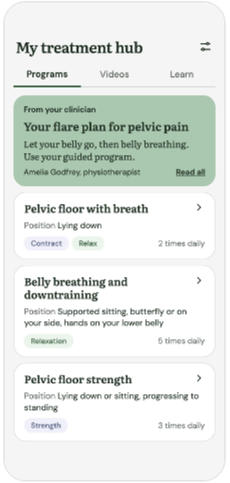

`Print.dc.html / 794x1123`

Pelvy

For pelvic health clinicians

Your advice and your program go home with your patient.

Pelvy is a pelvic health app for the time between appointments. You subscribe and set each patient up. They use it free for their first six months.

Your notes are the first thing your patient sees.

1. **Subscribe**
   $20 a month during the pilot. Join now and that stays your price.
2. **Set up a patient**
   Write your advice into their notes and build their program: strength, coordination or relaxation.
3. **They do the work at home**
   Pelvy counts every rep, runs the whole sequence and reminds them at the times they choose.

What Pelvy doesn't do yet

It doesn't connect to clinical software. Clinics run the two side by side.

Symptom tracking and bladder, bowel and pad weight diaries come after the pilot.

It isn't TGA certified. Pelvy is education and support, and you stay in charge of the care.

Patients whose clinic doesn't subscribe can still use it, for $4.99 a month or $19.99 a year.

Book a demo with Amelia.

Amelia Godfrey is a pelvic health physiotherapist and sets up every clinic herself.

pelvy.app
amelia@pelvy.app

Pelvy Pty Ltd, 135 Hearl Close, Brinsmead QLD. Pelvic health, between appointments.

Instagram post

A proof artboard from the brand canvas, rendered as it was drawn.

One app screen and one line, readable in a feed without the caption.

`Social.dc.html / 1080x1080`

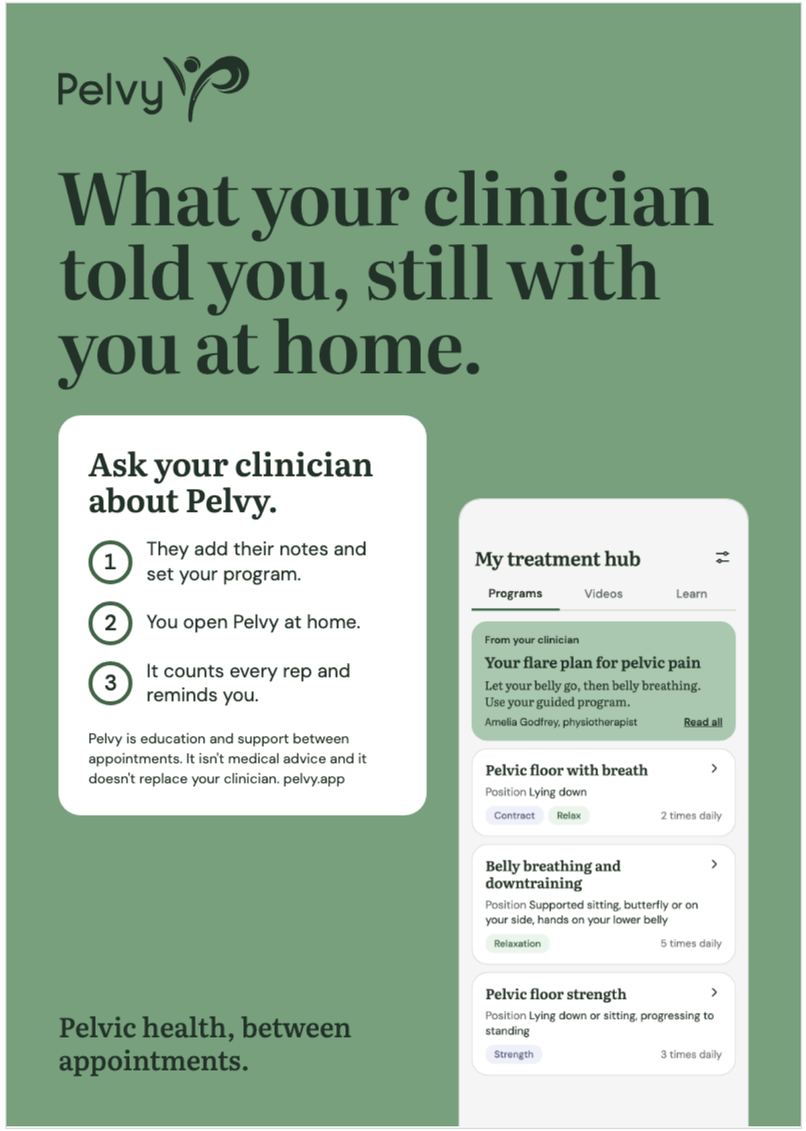

Waiting room poster

A proof artboard from the brand canvas, rendered as it was drawn.

A2 on a clinic wall, drawn at A4 proportion. Shows the app and tells a waiting patient to ask their clinician.

`Poster.dc.html / 794x1123`

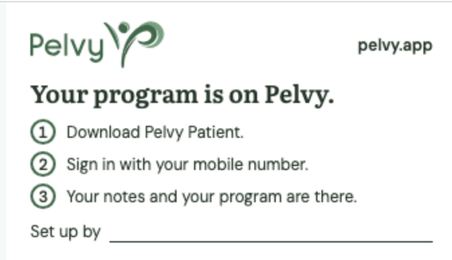

Patient set-up card

A proof artboard from the brand canvas, rendered as it was drawn.

The card a clinician hands over at the end of an appointment: your program is on Pelvy, here is how to open it.

`Card.dc.html / 336x192`

Tote bag

A mockup: the brand composited onto a real photograph of the surface.

For clinicians at a conference or a launch event. The symbol alone, one colour, screen-printed.

`MockupTotebag.dc.html / 1400x939`

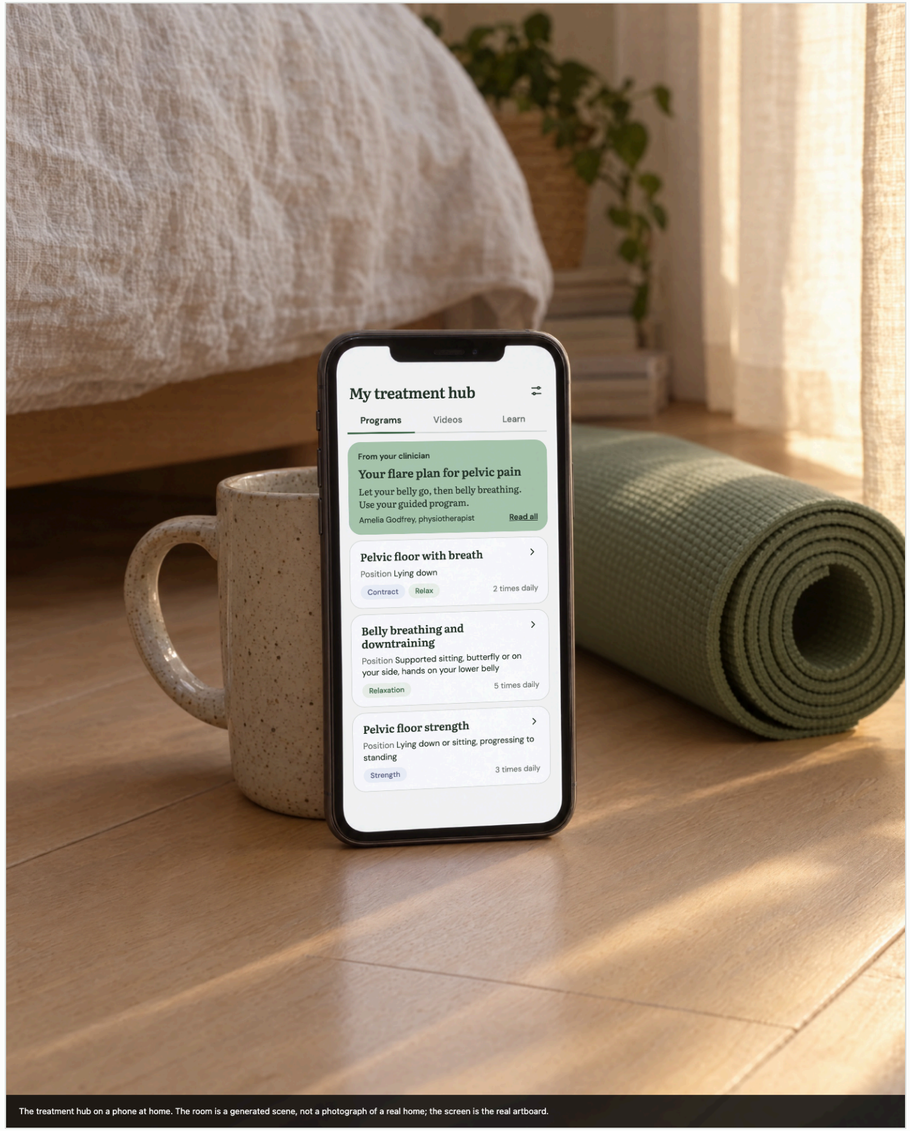

The symbol screen-printed in one colour on a canvas tote. The bag is a generated scene; the symbol is the real vector.

The app at home

A mockup: the brand composited onto a real photograph of the surface.

The treatment hub on a phone, in the place it is used. The lead image for the website and the store listing once it is shot for real.

`MockupTheappathome.dc.html / 1400x1750`

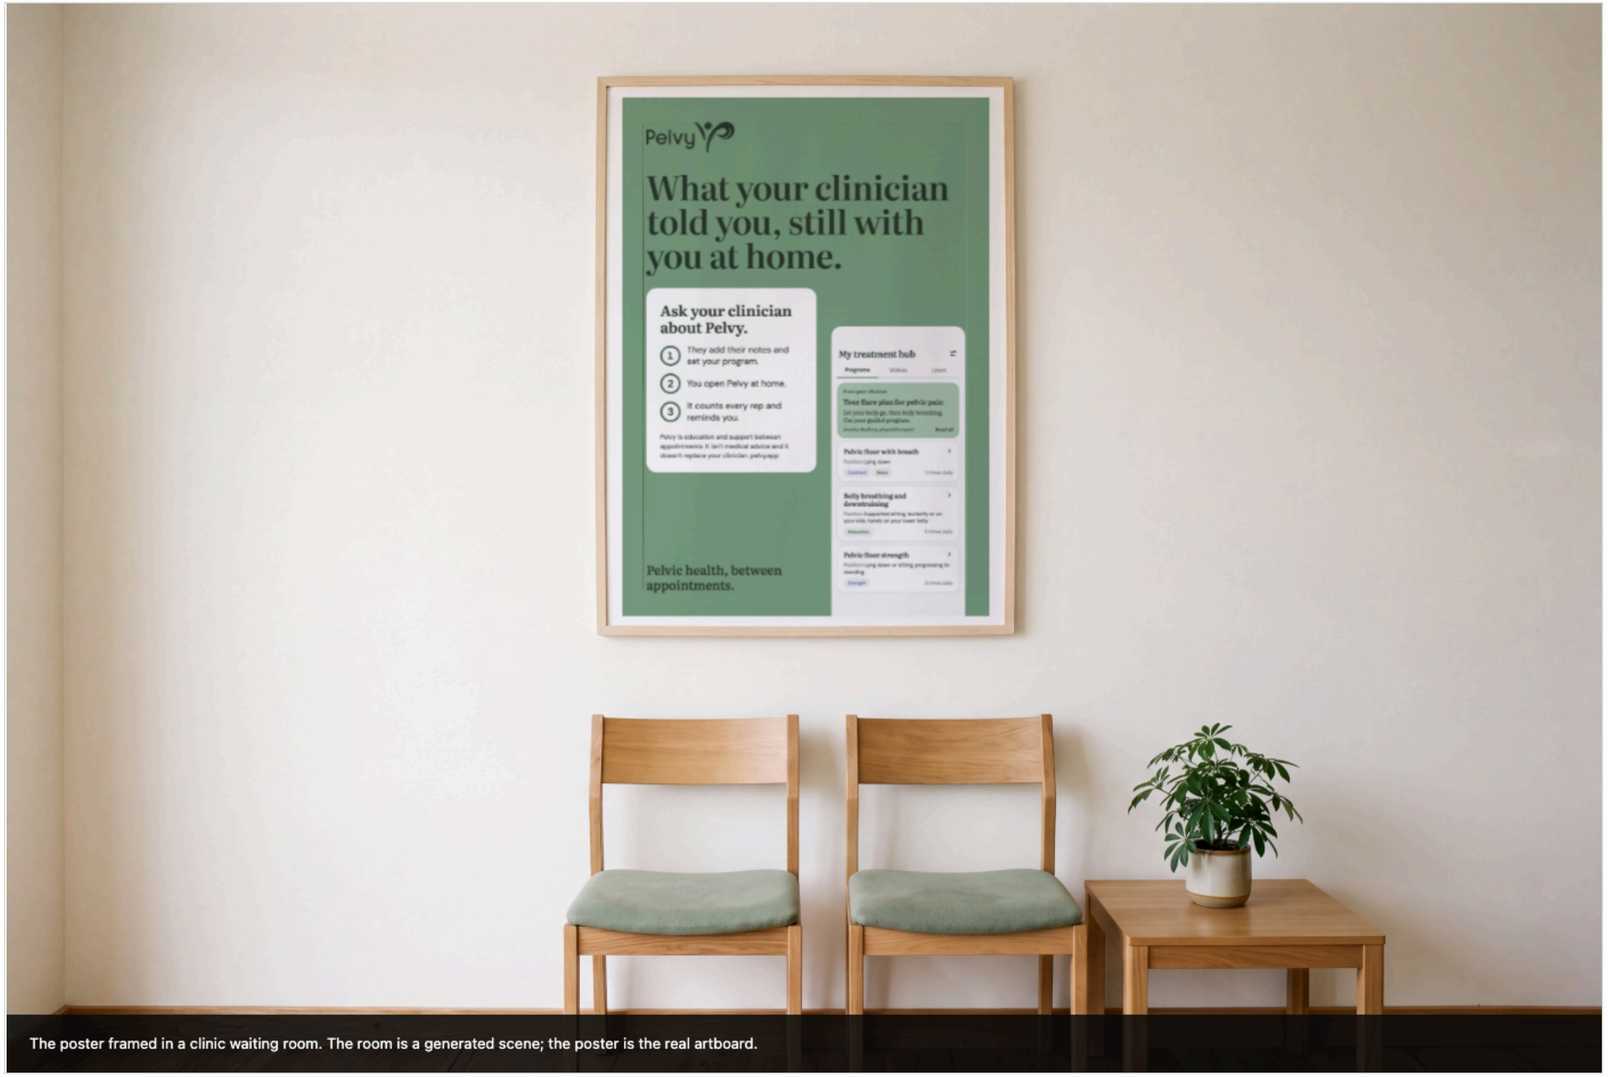

The treatment hub on a phone at home. The room is a generated scene, not a photograph of a real home; the screen is the real artboard.

The poster in a waiting room

A mockup: the brand composited onto a real photograph of the surface.

The poster framed on a clinic wall, read from a chair.

`MockupWaitingroomposter.dc.html / 1400x939`

The poster framed in a clinic waiting room. The room is a generated scene; the poster is the real artboard.

The set-up card on a clinic desk

A mockup: the brand composited onto a real photograph of the surface.

The card as it is handed over, at real size.

`MockupPatientsetupcard.dc.html / 1400x939`

The set-up card on a clinic desk. The desk is a generated scene; the card is the real artboard.

Rules and decisions

What not to do, what was decided and why, and what nobody has answered yet.

What not to do

The specific habits that would make this brand look like everyone else. Just do not do these things.

What this system is not. Renaming Pelvy, or changing the idea behind the symbol. Redesigning the app's flows. This system gives the app its colours, type and components; what each screen does is product work. Clinical content. The education and exercise library are Amelia's, and nothing here rewrites them. A regulatory review. The claims guidance in the voice chapter is a writing rule, not legal or TGA advice. A separate identity for Pelvy Lite. People who subscribe themselves and people set up by a clinic get the same brand.

- ✕ White text on sage. It is how Pelvy looked in 2024, how every wellness app looks, and it fails contrast at 2.9 to 1.
- ✕ Pink or coral anywhere, and the app's lilac ground and purple dots. They say women's wellness, and Pelvy is for everyone with a pelvis.
- ✕ Icons in pastel circles, in rows of three.
- ✕ Illustrated people of any kind: stock, flat, faceless or line-drawn. A drawing cannot show a pelvic floor exercise, so Pelvy shows the real app, real video and real rooms.
- ✕ A clinician's note that nobody wrote. A note is real and used with permission, or it is marked as a sample.
- ✕ A count ring holding anything except a numeral that is really counting something.
- ✕ A fourth radius. Panels and photographs take 22 pixels, buttons are pills, fields take 10.
- ✕ A testimonial, client logo or statistic that Amelia cannot source.
- ✕ The words treat, cure, fix or diagnose.
- ✕ CAPITALS for emphasis and exclamation marks to carry enthusiasm.

Decisions and open questions

What was decided, why, and what nobody has answered yet. A change nobody wrote down becomes an inconsistency the next person has to guess about.

Where this came from. Supplied 5, Extracted 19, Published 22, Assumed 1. Every statement in this deck is traceable to one of those; anything assumed is a working assumption, not a finding.

Decision log

DATE	DECISION	BECAUSE
2026-10-12	Position Pelvy as the between-appointments companion for pelvic health care, prescribed by the clinician.	It is the one frame the evidence supports today: the clinician pays, the patient cannot yet join alone, and the shipped features (stored advice, a program that counts, reminders) are all about the time between visits. The clinician FAQ already uses the phrase once.
2026-10-12	Draft the voice as a Caregiver with a Sage second voice, and keep the label out of the book.	It forces one character: someone who looks after you and knows the subject. The named failure to guard against is fussing over the reader, which in health copy reads as patronising.
2026-10-12	State the problem without the '20 per cent' statistic until it is sourced.	The site quotes it two ways and cites neither. Clinicians are the buyers and they check references.
2026-10-12	Build the identity on direction A, Clinic-grade (corporate trust), with the count ring as its one repeated device.	It answers the two intake assumptions directly: buyers pick what feels bigger or safer, and the brand needs to look like it came from one place. It is also the only direction that fixes the measured contrast failures without leaning on a soft palette. Chosen without a check-in because the run was requested as autonomous; Amelia can overrule it from the territory canvas.
2026-10-12	Pelvy green is #336841: the 2024 logo's sage at the same hue, taken from 67 to 47 per cent lightness.	The sage has two years of use behind it, so the hue stays. At its original lightness white text on it measures 2.97 to 1 and fails accessibility; deepened, it measures 6.57 to 1. The old sage survives as steps 7 and 8 of the same ramp.
2026-10-12	One accent, Exhale amber #EFA23F, taken from the orange the app already uses for breathe out. The website's slate lavender and the app's lilac ground and purple dots are retired.	The app has already taught patients that green means in and orange means out, so the accent arrives with a meaning. Lavender and lilac pull the palette toward the pastel look of the category and carry no meaning. Amber always carries dark text, and is never the only signal: it is paired with a word.

Open questions

QUESTION	ASSUMED MEANWHILE	WHO CAN ANSWER
Intake 1: what are we doing here, tidying up or replacing?	Modernising. Keep the equity that has been accumulating (the name, the sage green family, the figure that makes a P) and replace the execution (raster gradient logo, template website, stock illustration, the app and site not matching). Brief said 'modernising her brand end to end'; intake was not asked because the run was requested as autonomous.	Amelia, relayed by Jake
Intake 2: where does most of the work actually come from today?	A referral partner: clinicians subscribe and put their patients on Pelvy, and Amelia recruits clinics herself by demo. Inferred from the site: individuals cannot yet join without a clinician, and she onboards every clinic manually. So the proof set leads with the clinician demo deck, the app store profile, and the card a clinician hands a patient.	Amelia
Intake 3: when a clinic or a health service picks something else, why?	They pick what feels bigger or safer: an established exercise-prescription platform, an NHS-backed app such as Squeezy, or paper handouts they already trust. Pelvy is a founder-led pilot asking for a place inside hospital and clinic workflows, so the identity has to read as clinically serious before it reads as friendly.	Amelia
Intake 4: a year from now,	Everything looks like it came from the same place. The website, the app and the store listing currently use three different greens,	Amelia

Thank you for using the brand correctly.
